

# N4 Service - UDMI

UDMI

## Specification

Niagara 4 Support	Niagara 4.10 - 4.15
Platform Support	Web Supervisor JACE8000 JACE9000 Tyrrell Products IONA Honeywell CIPer iSMA MAC36 Lynxspring EDGE 534 / 514 Phoenix Contact ILC

Brand Support	Tridium / Centraline / Distech / Honeywell / JCI / Schneider / Trend
---------------	--

UDMI Support	1.4.3 1.5.0*
--------------	-----------------

License Options	UDMI Point License Packs Starting at 100 Points + Does not require Global Points Licenses
-----------------	---

Software Maintenance	All new purchases support the current release and next release of Niagara 4
----------------------	---

## Description

A UDMI Service for Tridium Niagara 4

The Universal Device Management Interface (UDMI) provides a high-level specification for the management and operation of physical IoT systems. This data is typically exchanged with a cloud entity that can maintain a "digital twin" or "shadow device" in the cloud.

By design, this schema is intended to be:

- Universal: Apply to all subsystems in a building, not a singular vertical solution.
- Device: Operations on an IoT device, a managed entity in physical space.
- Management: Focus on device management, rather than command & control.
- Interface: Define an interface specification, rather than a client-library or RPC mechanism.

Niagara 4 UDMI Service is Compatible with:

- Google Core IoT
- ClearBlade
- Standalone on Prem MQTT Broker(s)
- Tyrrell Analytics

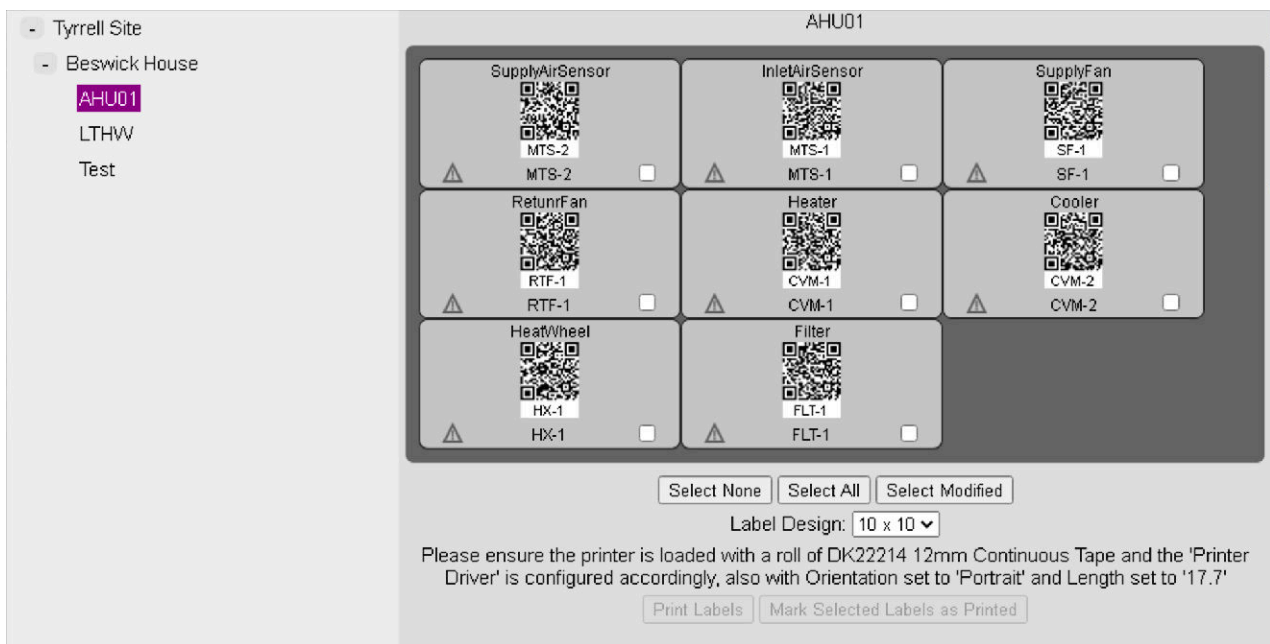

# N4 Service - UDMI

UDMI

## UDMI Service Features

- Fast Management Windows (Site / Assets / Points)
- GIT Import for up to date UDMI Dependencies
- Country& City Codes / BDNS / DBO / Brick properties
- Assets BDNS Device Descriptions
- Local Station Point Discovery
- DBO / Brick Naming Conventions
- MQTT Pub / Sub
- Write-back Support From 'Cloud'
- Bulk CVS Import / Export
- Allowing for rapid engineering & setup
- Asset QR Code Generation
- Supporting custom encoding and error correction levels
- QR Code Print Management UI
